Abdul Qadeer

0313-6385048 | abdulqadeermirjat@gmail.com | LinkedIn | GitHub | Karachi, Sindh, Pakistan

Summary

AI & Full Stack Developer at Aceva Technology and 7th-semester Software Engineering student at Sukkur IBA University, with a completed Data Science & AI internship at Arcana Info. Shipped production systems in daily use, including an enterprise POS across multiple supermart branches and an inventory platform at Sukkur IBA. Skilled in React, TypeScript, Python, and Supabase, with hands-on machine learning and NLP experience.

Experience

Aceva Technology Sep 2026 – Present
AI & Full Stack Developer *Pakistan*

Arcana Info (Pvt.) Ltd. Jun 2026 – Sep 2026
Data Science & AI Intern | Technical Team *Karachi, Pakistan*

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL (MySQL, SQLite, Supabase), HTML/CSS
Frameworks & Libraries: React.js, Tailwind CSS, Flask, Streamlit, Scikit-learn, Pandas, NLTK, TF-IDF
Concepts & Tools: Machine Learning, NLP, Role-Based Access Control (RBAC), REST API Design, UI/UX Design, Data Visualization, Git

Projects

AI Receptionist | GitHub
- Building an AI phone receptionist that answers restaurant calls, takes pickup orders, and sends each order to an owner dashboard.
- Developed for Aceva Technology's restaurant clients, with a public SaaS version planned.

Enterprise POS System | *React, TypeScript, Supabase, RBAC*
- Designed and deployed a scalable POS solution for a supermart chain, currently running on local infrastructure across multiple branch locations.
- Built customer and supplier ledger modules tracking live transaction history, outstanding balances, and account reconciliation per branch.
- Implemented three-tier Role-Based Access Control (Admin, Manager, Cashier) with dedicated dashboards and scoped permissions via Supabase Auth.
- Delivered a type-safe React and TypeScript frontend with real-time data sync using Supabase Realtime engine.

Inventory Management System | *React.js, Tailwind CSS, MySQL*
- Replaced a manual paper-based tracking process at Sukkur IBA University with a centralized system deployed on campus infrastructure, currently in active daily use.
- Enabled faculty to submit equipment requests remotely, eliminating physical paperwork and reducing request processing time.
- Implemented a multi-level approval pipeline (Director to PVC) with automated status updates, accelerating resource allocation decisions.
- Delivered full asset traceability through a relational MySQL schema, including assignment history and current holder tracking.

AI-Powered Legal Judgment Predictor | *Python, Scikit-learn, Streamlit, TF-IDF*
- Built a court-decision prediction tool trained on curated historical judgments, identifying legal issues and citing applicable law articles (e.g., CNSA 1997) in real time.
- Applied TF-IDF vectorization for legal text representation and trained a Random Forest classifier to surface relevant precedents from case facts.
- Designed a Streamlit interface enabling lawyers to input case details and receive structured legal analysis, reducing manual research overhead.

LawBridge; Attorney Booking Platform | *MySQL, UI/UX, RBAC*
- Built a centralized portal connecting clients with verified attorneys, supporting attorney discovery, profile management, and appointment booking.

- Implemented RBAC for three user types (Admin, Lawyer, Client) with dedicated interfaces and data-scoped permissions.
- Engineered a real-time appointment system with live status tracking and an Admin analytics dashboard for monitoring platform activity.
- Designed a normalized relational schema with strict referential integrity constraints ensuring consistent data across booking and billing entities.

Sentiment Analysis & Topic Modeling | *Python, Flask, SQLite, NLTK, LDA*

- Built a modular Flask application for real-time sentiment classification and topic discovery, processing 50,000+ IMDB reviews.
- Engineered a custom NLP preprocessing pipeline using Regex and NLTK tokenization, stopword removal, and lemmatization to normalize noisy input data.
- Vectorized corpus with CountVectorizer and trained a Logistic Regression model for binary sentiment classification.
- Built a results dashboard surfacing detected sentiment, per-review confidence scores, and top LDA-identified topic keywords.

WhatsApp Chat Analyzer | *Python, Pandas, Matplotlib, Seaborn, Streamlit*

- Built a chat analysis tool that parses exported WhatsApp `.txt` files and generates a statistical breakdown of conversation patterns per user.
- Engineered a text processing pipeline to extract message frequency, most-used words, word count distribution, and emoji usage ranked by frequency.
- Implemented interactive visualizations using Matplotlib and Seaborn bar charts, word clouds, and emoji frequency graphs to present insights clearly.
- Designed a file-upload interface allowing users to import any WhatsApp export and receive instant analysis without manual data formatting.

AI Study Chatbot | *Python, NLTK, Scikit-learn, TF-IDF, Tkinter* | *Group Project Contributor*

- Contributed chatbot design logic and intent architecture; implemented TF-IDF vectorization with a Logistic Regression classifier for response prediction.
- Assisted in building the NLP preprocessing pipeline tokenization, lemmatization, and stopword filtering to improve input understanding accuracy.

Education

Sukkur IBA University
BS Software Engineering | *7th Semester* | *CGPA: 3.4* — *Aug 2023 – Present*

Govt. Degree College Dadu — Dadu, Pakistan
Higher Secondary Certificate | *Score: 93.90%* — *2019 – Dec 2021*

Certifications & Leadership

Semester Exchange Program Selected Candidate | *Sukkur IBA University* — Italy, 2025

- Competitively selected among university peers for an international academic exchange based on academic merit and performance.

Model United Nations (SIBAUMUN 4.0) | *Sukkur IBA University* — Nov 2025

- Recognized at a 3-day Model United Nations conference for contributions in diplomacy, structured debate, and global policy problem-solving.
